

What about Targeting Diabetes Society?

The initiative of Targeting Diabetes Taskforce Group was born in 2010 during a meeting about oxidative stress, mitochondria and the impact on diabetes. The members from the [International Society of Microbiota](#) (ISM) and [World Mitochondria Society](#) (WMS) found that during each meeting, a specific session was dedicated to metabolic syndrome and diabetes. Many scientists, clinicians and experts discussed to set up the **Targeting Diabetes Society** (TDS) during the [7th International Conference on Diabetes & Obesity](#) which was held in Riga, Latvia, in October 2013.

Diabetes & its complications

Today Diabetes complications need a urgent multi-disciplinaries task force. The idea of TDS is to bring a new level of understanding of diabetes science out of the classical existing point of view.

TDS is a non-profit-making international organization. In no case, part of its assets or incomes shall benefit to any private or individual partnership or corporation.

During TDS meetings, conferences and workshops, we will highlight all new innovations, new insulins, new non invasive markers, new drugs, guidelines and policy issues and a particular attention will be dedicated to diabetes complications.

The aims of TDS are to:

1.

Offer a new perspective and solutions for diabetes and health

2.

Create a multi-disciplinary platform dedicated to all healthcare professionals, specialists and political institutions

3.

Cover all aspects of diabetes care, preventing, diagnosis, recent advances and innovations including type 1 and type 2 diabetes, obesity, neuropathy, retinopathy, kidney, liver and cardiovascular complications, depression, sexuality and accelerated aging,

4.

Analyse and provide recommendations to TDS's members, health decision makers and institutions about the latest researches, uses and problems. This analysis will be done by international qualified team members of TDS,

5.

Transfer the basic researches and data into a real clinical and pharmaceutical applications,

6.

Encourage communication and interaction among researchers, physicians, nutritionists, industrials, food technology and strategic marketing managers through a global diabetes network,

7.

Increase integration and interaction of the various disciplines involved in diabetes fields.
